Allowable Subject Matter

1. Claims 17, 19, 20 and 22 are allowed now renumbered as 1-4 in view of applicant's arguments in the appeal brief.

The closest prior art, Durbin et al (6,003,773), discloses conventional rectangular photosensor elements, an optical sensing area that represents the result of the use of a typical solid state video imaging array with a lens system that provides a magnification ratio of ten to one. Durbin et al fail to anticipate or render obvious or even suggest:

An arrangement of a sensor and optics comprising:

As per claims 17 and 19, an array having a shape to achieve compensation of said curvilinear distortion, including having arcuate edges to establish said compensation;

wherein said photosensors are disposed in a plurality of columns and a plurality of rows and wherein said photosensors combine to define an optical axis for said array, adjacent columns being spaced apart by an arcuate boundary, with curvatures of said arcuate boundaries increasing with departure from said optical axis.

As per claims 20 and 22, an array having a shape to achieve compensation of said curvilinear distortion, including having a plurality of arcuate outer edges to establish said compensation; said photosensors being varied dimensionally to define said curvilinear shape, said curvilinear shape being aligned relative to said curvilinear distortion to introduce a physical distortion that offsets said optical curvilinear distortion;

wherein said photosensors are disposed in a plurality of columns and a plurality of rows and wherein said photosensors combine to define an optical axis for said array, adjacent columns

being spaced apart by an arcuate boundary, with curvatures of said arcuate boundaries increasing with departure from said optical axis.
